New isolated antibody that neutralizes botulinum neurotoxin type A, useful for diagnosing botulism or for treating pathologies associated with botulinum neurotoxin poisoning.

Example 1; SEQ ID NO 86; 110pp; English.

The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A (BoNT/A). An isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a clone chosen from clone 25, C25, C39, 1C6, 3D12, B4, 1F3, huC25, A1, Ar2, WR1(V), WR1(T), 3-1, 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum neurotoxin type A (BoNT/A). Also described are: a polypeptide (II) comprising BoNT/A neutralising epitope having an epitope that is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               specifically bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (III) comprising several antibodies of the continuum neurotoxin antibodies, where each antibody is specific for a different epitope of a botulinuum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. The following are disclosed: a pharmaceutical composition comprising (I); and a kit comprising (I). (I) is useful for neutralising comprising (I); and a kit comprising (I). (I) is useful for neutralising BONT/A antibody and for neutralising a botulinum neurotoxin which involves contacting neurotoxin with (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism or for treating pathologies associated with botulinum neurotoxin poisoning. (I) exhibits specificity and affinity towards BONT/A. (I) enables rapid detection or diagnosis of botulism. This is the amino acid sequence of a mouse light chain variable fragment anti-botulinum toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match 100.0%; Score 590; DB 8; Best Local Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC clone where (I) binds to and neutralises botulinum neurotoxin type A CC (BONT/A). An isolated antibody (I) that specifically binds to an epitope CC specifically bound by an antibody expressed by a clone chosen from clone CC 525, C25, C39, 106, 3012, B4, IF3, huC25, Ar1, Ar2, WRI(V), WRI(T), 3-1, CC 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum CC neurotoxin type A (BONT/A). Also described are: a polypeptide (II) CC specifically bound by an antibody expressed by clones as mentioned in (I) producing (I), and a composition (II) comprising several anticomposition in the combination of comprising several anticomposition in the combination of comprising (I), and a composition neurotoxin and the combination of comprising (I); and a kit comprising (I) (I) is useful for neutralising combination of antibodies shows greater toxin neutralisation than the single antibodies combination of antibodies shows greater toxin with (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the combination of antibodies shows greater toxin neutralisation than the combination of antibodies shows greater toxin neutralisation than the combination of antibodies shows greater toxin neutralisation than the consisting pathologies associated with botulinum neurotoxin and the combination of antibodies associated with botulinum neurotoxin (I) exhibits specificity and affinity towards BONT/A. (I) cenables rapid detection or diagnosis of botulism. This is the amino acid sequence of a mouse light chain variable fragment anti-botulinum toxin can be compared to the combination of another chain variable fragment anti-botulinum toxin and the combination of a mouse light chain variable fragment anti-botulinum toxin can be considered as the chain variable fragment anti-botulinum toxin can be considered as the chain variable fragment anti-botulinum toxin cacting the considered as the chain variable fragment anti-botulinu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Anti-epidermal growth factor receptor (EGFR) single chain antibodies and antibodies constructed from anti-EGFR antibody fragments can be used for diagnosis of tumours and assessment of tumour growth in vitro and in vivo. They may also be used in a pharmaceutical composition for the therapy of e.g. melanomas, gliomas and carcinomas. The antibodies and fragments are derived from mice but are humanised so as to cause minimum reaction against them. They are produced using the phage antibody library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Kettleborough AC, Bendig MM, Mitjans F, Rosell E, Blasco

The antibodies neutralise KDR activation. The immunoglobulin may be a multivalent single chain antibody, a monovalent single chain antibody, a diabody, a triabody, a humanised antibody or a chimerised antibody. The immunoglobulin molecules bind specifically to an extracellular domain of the KDR receptor with the same affinity as VEGF. Overexpression of VEGF has been implicated in a number of human tumour cell lines including glioblastcoma multiforme, hemangish sarcoma. The antibodies therefore have applications in treating these conditions. This sequence encodes a preferred heavy chain complementary determining region of the immunoglobulins of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to novel immunoglobulin molecules that bind to kinase insert domain-containing receptor (KDR) (a human homologue of mouse foetal liver kinase (FLK)-1 receptor) with an affinity comparable to human vascular endothelial growth factor (VEGF) and that neutralises activation of KDR. Sequences of the invention are useful for neutralising the activation of KDR, for reducing tumour growth and for inhibiting angiogenesis. The present sequence is mouse anti-KDR plCil scFv antibody light chain variable region (VL)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel immunoglobulin molecule for reducifig tumor growth, binds to kinase insert domain-containing receptor with an affinity comparable to human vascular endothelial growth factor, and fieutralizes activation of KDR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   foetal liver kinase; FLK-1 receptor; vastular endothelial growth factor;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Crimplex of two polypeptides (P1) and two second polypeptides (P2) which care stably associated in an immunoglobulin like complex. P1 has an CC antigen-binding site located to the N terminus of immunoglobulin (Ig) (Ig) chain constant domain (CL domain), and P2 has an antigen-binding CC light chain constant domain (CL domain), and P2 has an antigen-binding CC site located to the N terminus of the CH1 domain. (I) is useful for: CC neutralising the activation of a vascular endothelial growth factor CC (VEGP) receptor; reducing tumour growth; inhibiting angiogenesis; creducing endothelial cell proliferation; inhibiting VEGP induced CC migration of human leukaemia cells; blocking interaction of a protein and it sligand; promoting interactions between immune cells and target cells; cand in vivo and in vitro for investigative, diagnostic or treatment CC methods. The design of (I) provides for efficient production so that CC substantially all of the antigen-binding proteins produced are assembled in the desired configuration. (I) is bivalent and bispecific, homogeneous and in tetrameric form. The heavy chain constant domains which constitute the Fc region (e.g., CH2 and CH3 for an IGG molecule) of a natural constitute of an engineered provide other antibody functions can be present. There is no requirement for processing in vitro to obtain the complete product. This sequence represents a light chain variable domain (VH) incorporated contor Fv, an engineered processing in vitro to obtain the complete product. The method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   receptor and a second antigen-binding site specific for a second VEGF receptor. The bispecific antigen-binding proteins block activation of VEGF receptor and are useful for reducing or inhibiting VEGF-induced cellular functions such as mitogenesis of vascular endothelial cells a migration of leukaemia cells. The antibodies are useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 tumours and for in vivo or in vitro for investigative and diagnostic methods. This sequence represents a mouse protein relating to the bispecific antibodies that bind to the VEGF receptors of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New bispecific antibodies having antigen-binding sites specific for a first vascular endothelial growth factor (VEGF) receptor and for a second VEGF receptor, useful for inhibiting migration of leukemia cells, or for treating tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel antibody having a first antigen binding site specific for a first vascular endothelial growth factor (VEGF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N-PSDB; ABT23303.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to novel immunoglobulin molecules that bind to kinase insert domain-containing receptor (KDR) (a human homologue of mouse foetal liver kinase (FLK)-1 receptor) with an affinity comparable to human vascular endothelial growth factor (VEGF) and that neutralises activation of KDR. Sequences of the invention are useful for neutralising the activation of KDR, for reducing tumour growth and for inhibiting angiogenesis. The present sequence is KDR binding immunoglobulin related

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC antigen-binding site located to the N terminus of immunoglobulin (Ig)
CC light chain constant domain (CL domain), and P2 has an antigen-binding
CC site located to the N terminus of the CHI domain. (I) is useful for:
CC enutralising the activation of a vascular endothelial growth factor
CC (VEGP) receptor; reducing tumour growth; inhibiting angiogenesis;
CC reducing endothelial cell proliferation; inhibiting angiogenesis;
CC enducing endothelial cell proliferation; inhibiting vEGF induced
CC its ligand; promoting interactions between immune cells and target cells;
CC and in vivo and in vitro for investigative, diagnostic or treatment
CC enthods. The design of (I) provides for efficient production so that
CC in the desired configuration. (I) is bivalent and bispecific, homogeneous
CC in the desired configuration. (I) is bivalent and bispecific, homogeneous
CC antibody and which provide other antibody functions can be present. There
CC is no requirement for processing in vitro to obtain the complete product.
CC is the samino acid sequence of a single chain variable fragment
CC (scPv), an engineered protein containing a variable light and variable
CC heavy domain on one polypeptide, described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel antibody having a first antigen binding site specific for a first vascular endothelial growth factor (VEGF) receptor and a second antigen-binding site specific for a second VEGF receptor. The bispecific antigen-binding proteins block activation of the VEGF receptor and are useful for reducing or inhibiting VEGF-induced cellular functions such as mitogenesis of vascular endothelial cells and migration of leukaemia cells. The antibodies are useful for treating tumours and for in vivo or in vitro for investigative and diagnostic methods. This sequence represents a mouse protein relating to the bispecific antibodies that bind to the VEGF receptors of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New bispecific antibodies having antigen-binding sites specific for a first vascular endothelial growth factor (VEGF) receptor and for a second VEGF receptor, useful for inhibiting migration of leukemia cells, or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Zhu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel antibody having a first antigen binding CC site specific for a first vascular endothalial growth factor (VEGF) CC receptor and a second antigen specific for a second VEGF receptor. The CC invention further relates to: an antibody that specifically binds to an extracellular domain of a first VEGF receptor and an extracellular domain CC of a second VEGF receptor, where binding of the antibody to the first and CC second VEGF receptor neutralizes activation of that VEGF receptor; a cC method for making the antibody by co-expressing in a host cell a cC immunoglobulin heavy chain domain located to the N-terminus of the second immunoglobulin light chain variable domain; a recombinant DNA construct CC encoding a second polypeptide having the second immunoglobulin light chain variable domain, a recombinant DNA construct CC immunoglobulin light chain variable domain, for time and in a manner CC sufficient to allow expression of the polypeptides and formation of the second VEGF receptor in a cell by treating a cell with the antibody; a method for neutralizing activation of a first VEGF receptor CC antibody; a method for recursive timour growth in a mammal by treating the mammal by treating a cell with the cCC antibody cited above; a method for reducing tumour growth in a mammal by treating a cell with the activities. The VEGF receptor antigen can be used to create a vaccine. The antibody cited above. The antibody has cytostatic and immunostimulant combining angiogenesis in a mammal by treating the mammal with the activities. The VEGF receptor antigen can be used to create a vaccine. The antibody is useful for reducing tumor growth in a mammal and for inhibiting angiogenesis. This secuence represents a kinase insert domain-

                                                                                                                                                     밁
                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                                      This invention describes a novel cell-targeting vector (A) containing a CDNA sequence (I) encoding a single-chain variable antibody fragment (G (scFv). The products of the invention have antiviral, cytostatic and cimmunostimulant activity and can be used in gene therapy, immunization C and diagnosis particularly of T cell-associated diseases, specifically C acquired immune deficiency syndrome (AIDS), severe combined immune C confidency syndrome (AIDS), severe combined immune C confidency (SCID) or T cell lymphoma. (A) target T cells, independently C confidency (SCID) or T cell lymphoma. (A) target T cells, independently C confidency (SCID) or T cell lymphoma. (A) target T cells, independently C confidency (SCID) or T cell lymphoma. (A) target T cells, independently C confidency (SCID) or T cell lymphomatric or ther human cells. A vector designated 7A5 encodes a 329 amino acid single-chain variable antibody C confinency, fully defined in the specification. It was used to transform C confidency (SNV)) cells, C8166 (human T lymphocyte) cells, and Hela (human cervical carcinoma) cells. After 48 hours, the cells were stained with X-gal to C construction for D17, 1 million for C8166 but less than 100 for Hela, C showing the high selectivity for human T cells. This sequence represents the SNV-env leader/human 7B2-scFv fusion construct used in the invention. C (Updated on 11-SEP-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                             The invention relates to a method for inhibiting the growth of non-solid cc tumour cells that are stimulated by a ligand of vascular endothelial cc growth factor receptor (VEGFR) in mammals particularly humans. The method crown factor receptor (VEGFR) in mammals particularly humans. The method crown factor receptor (VEGFR) in mammals particularly humans. The method cc involves treating the mammals with humanised VEGFR monoclonal antibodies cc (antagonists). Humanised monoclonal antibody comprises humanised mouse controls region of the humanised constant region, where the humanised cc (CC variable region contains mouse complementarity determining region cc (CDR) grafted into human variable region. The method is useful for creating leukaemias such as acute or chronic myelocytic leukaemia, acute cor chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, cc multiple myelomas and lymphoid cells, particularly those related to non-cc Hodgkin's and Hodgkin's disease. The present sequence is humanised cc antibody light chain fragment used in the exemplification of the crown to the control of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Scoring table:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Database :
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    on:
 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

B54378
Ig light chain V region anti-triplex DNA - mouse (fragment)
C;Bpecies: Mus musculus (house mouse)
C;Date: 06-Oct-1994 #sequence_revision 18-Nov-1994 #text_change 21-Jan-2000
C;Accession: B54378

Ig light chain V region - mouse (fragment)
N,Alternate names: L6 anti-tumor antibody
C;Species: Mus musculus (house mouse)
C;Species: Mus musculus (house mouse)
C;Accession: A42848; 833902
R;Fell, H.P.; Gayle, M.A.; Yelton, D.; Lipsich, L.; Schieven, G.L.; Marken, J.S.
J. Biol. Chem. 267, 15552-1558, 1992
A;Title: Chimeric L6 anti-tumor antibody. Genomic construction, expression, and A;Reference number: A42848; MUID:92348410; PMID:1639794
A;Accession: A42848
A;Status: preliminary
A;Holecule type: DNA
A;Residues: 1-107 <FEL>
A;Cross-references: UNIPARC:UPI0000115334; EMBL:M90690
A;Cross-reference extracted from NCBI backbone (NCBIN:109958, NCBIP:109959)

  Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                       447.5

GENERAL INFORMATION:

APPLICANT: Emery, Stephen

APPLICANT: Copley, Clive Graham

APPLICANT: Copley, Clive Graham

APPLICANT: Edge, Michael Derek

TITLE OF INVENTION: Monoclonal Antibody to CEA, Conjugates Comprising Said

TITLE OF INVENTION: Antibody, and Their Therapeutic Use in an Adept System

FILE REFERENCE: Monoclonal Antibody to CEA

CURRENT APPLICATION NUMBER: U9/09/171,945

CURRENT APPLICATION NUMBER: U9/09/171,945

CURRENT FILING DATE: 1998-10-29

PRIOR APPLICATION NUMBER: GB9703103.3

PRIOR FILING DATE: 1997-02-14

PRIOR APPLICATION NUMBER: GB9609405.7

PRIOR APPLICATION NUMBER: PCT/GB97/01165

PRIOR APPLICATION NUMBER: PCT/GB97/01165

Patent No. 6903203
GENERAL INFORMATION:
APPLICANT: Copley, Clive G
APPLICANT: Edge, Michael Derek
APPLICANT: Emery, Stephen Charles
TITLE OF INVENTION: Monoclonal Antibody to CEA, Conjugates Comprising Said Antibody,
TITLE OF INVENTION: Their Therapeutic use in an Adept System
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SOFTWARE: PatentIn Ver.             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB seq
